

We first met Andria when we hired ACM Designs for our cottage renovation. We chose ACM because Andria had recently completed a similar job for one of our close friends. They highly recommended her and we were impressed by the quality and design of their project. We booked an initial consult with Andria and knew right away she was the right designer for the cottage renovation we had been planning (and dreaming about) for several years.

Andria and her team helped us initially with a plan for a kitchen renovation. Like many of our projects, it soon expanded and became a full main floor and basement renovation as we grew increasingly comfortable with her design expertise, attention to detail and client-focused approach. Our experience throughout the project was next level and exceeded all expectations. We have done multiple other house renovations over the years and used multiple designers, and Andria stands out amongst them all. She and her team are incredible designers who start by really understanding their clients' preferences, wants and needs to ultimately create and deliver incredible results.

Their quality of work and attention to detail was nothing short of exceptional. They communicated at every step of the process, from design to planning to construction, and I already miss the FaceTime project progress reports!! The transition from our previous space is remarkable. Their design has improved the functionality of our cottage and created a warm and welcoming space for our whole family to enjoy for years to come.

Working with Andria and her team made the entire renovation process stress-free. I would recommend ACM Designs to anyone looking for an interior decorator without hesitation. Their communication and transparency made us feel at ease and up-to-date throughout the entire process. But most importantly, Andria had incredible vision and created a remarkable space.

It is because of Andria's expertise, professionalism, and client-focused approach that we strongly endorse Andria for Renovator of the Year

We are already planning our next ACM project!

Regards,

Kevin and Chint
